B.Tech. (Electrical Engineering)  
V Semester  
ANALOG AND DIGITAL COMMUNICATION

Unit-I
Introduction to Communication Systems: Block diagram, modulation and demodulation, need for modulation, transmission considerations and decibel ratios. Amplitude modulation, generation of AM waves, concept of SSB and DSB modulation, vestigial sideband transmission, power-relationships, AM receivers, S/N ratio.

Unit-II

Unit-III
Pulse modulation, PAM, PPM, PWM systems. Concept of PCM, basic coding and quantization, sample and hold, quantization noise, signal to noise ratio, companding, TDM, Delta modulation, adaptive delta modulation, S/N ratio, comparison of PCM, delta and adaptive delta modulation.

Unit-IV
ASK, PSK, FSK, differential PSK and quadrature shift keying, synchronization concepts and phase locked loops. Digital modulation techniques, Generation, Detection, equation and bandwidth of amplitude shift keying(ASK) Binary phase shift keying(BPSK), Differential phase shift keying(DPSK), M-Ary PSK, Binary Frequency shift keying(BFSK), M-Ary FSK Quadrature Amplitude modulation(QAM), MODEM, Introduction to probability of error.

Unit-V
Block diagram of Fibre optic communication systems, light propagation in optical fibres, numerical aperture and acceptance cones of OFs, losses in optical fibres. Multiplexing in optic Fibre links. An introduction to telephone exchange systems. Telecommunication traffic, circuit switching, message switching and packet switching. Resource sharing and multiple access techniques. An introduction to microwave, radar and satellite communication.

List of Experiments:-
1. Study of sampling process and signal reconstruction and aliasing.
2. Study of PAM PPM and PDM.
3. Time division multiplexing (TDM) and De multiplexing
4. Study of ASK PSK and FSK transmitter and receiver.
5. Study of AM modulation and Demodulation techniques (Transmitter and Receiver) Calculate of parameters.
6. Study of FM modulation and demodulation (Transmitter and Receiver) & Calculation of parameters.
7. Study of PCM transmitter and receiver.
8. Study of AVC and AFC.
9. Study of super heterodyne receiver and characteristics of ratio radio receiver.

2. B.P. Lathi, Modern Digital and analog communication system.
B.Tech. (Electrical Engineering)  
V Semester  
ANALOG & DIGITAL ELECTRONICS

Unit-I Analog  

Unit-II  
OP-AMP, Differential amplifier and its DC, AC analysis, OP-AMP characteristics, Non-Inverting/Inverting Voltage and Current feedback. Regulated power supplies; Oscillators and Timer (555)

Unit-III Digital:  
Logic gates and Logic Families: Logic gates, Universal gates, transistor as a switching element, Combinational Logic gates Introduction to combinational circuits, arithmetic and logical operation, design of Half adder & full adder, subtractor circuits, parity generator & and checker, code converter, decoders, multiplexers, demultiplexers, comparators.

Unit-IV  
Sequential Circuits- Flip-flops, bistable circuits: RS, JK, D, T, Master/Slave Flipflop, race around condition, latches, synchronous and asynchronous counters up & down counters, shift registers, state transition diagram

Unit-V  
A/D & D/A Converters- D/A converter, accuracy, resolution and precision, variable resistor network, binary ladder, A/D converter, accuracy and resolution, simultaneous conversion, counter method, continuous A/D converter, dual slope, successive approximation method.

List of Experiments:  
1. Study the diode clipping circuits.  
2. Study the diode clamping circuits.  
3. Study Zener diode as voltage regulator.  
4. Study the common emitter configuration of a transistor.  
5. Study the common base configuration of a transistor.  
6. Study the common collector configuration of a transistor.  
7. Study FET as (a) A source follower (b) A voltage variable resistor.  
8. Study FET as (a) A chopper (b) A constant current source.  
9. Study the following mathematical operations using Op-Amps:- (a) Addition (b) Subtraction (c) Multiplication (d) Division (e) Integration (f) Differentiation  
10. Study the Op-Amp as wave form Generator: (a) Astable Multivibrator (b) Triangle Wave Generator (c) Schmitt Trigger

5. H. Taub and D. Schilling, „Digital Integrated Electronics”.
6. Gothman, „Digital Electronics”.
B.Tech. (Electrical Engineering)  
V Semester  

ELECTRONIC INSTRUMENTATION

Unit-I  
Introduction to CRO, Different parts of CRO, Its Block diagram, Electrostatic focusing, 
Electrostatic deflection, post deflection acceleration, Screen for CRTs, Graticule, Vertical & 
Horizontal deflection system, Time base circuit, Oscilloscope probes and transducers, 
Attenuators, Application of CROs, Lissajous patterns, Special purpose CROs- Multi input, Dual 
trace, Dual beam, Sampling, Storage (Analog & Digital) Oscilloscopes.

Unit-II  A.C. Bridge Measurement  
Sources and detectors, Use of Bridges for measurement of inductance, Capacitance & Q factor 
Maxwells bridge, Maxwells inductance capacitance bridge, Hays bridge, Andersons bridge, 
Owen's Bridge, De-sauty's Bridge, Schering Bridge, High Voltage Schering bridge, Measurement 
of relative permittivity, Heaviside cambell's bridge, Weins bridge, Universal bridge, Sources of 
errors in Bridge circuit, Wagner's Earthing device, Q meter and its applications and measurement 
methods.

Unit-III Transducers  
Transducers definition and classification, mechanical devices as primary detectors, Synchros, 
Piezo-Electric transducers, Magnet elastic and magnetostrictive Hall effect transducers, Opto- 
electronic transducers such as photo voltaic, Photo conductive, photo diode and photo conductive 
cells, Photo transistors, Photo optic transducers. Introduction to analog & Digital data acquisition 
systems-Instrumentation systems used, Interfacing transducers to electronic control & measuring 
systems Multiplexing - D/A multiplexing A-D Multiplexing, Special encoders. Digital control 
description

Unit-IV Signal Generators  
Fixed & variable frequency AF oscillators, Sine wave generators, Standard signal generator, AF 
Sine and Square wave generator Function generator, Square and pulse generator, Random noise 
generator, Sweep generator, TV Sweep generator, Marker generator, Sweep- Marker generator, 
Wobblyscope, Video pattern generator Vectroscope, Beat frequency oscillator Wave analyser 
Basic wave analyzer, Frequency selective wave analyzer, Heterodyne wave analyzer, Harmonic 
distortion, analyzer, spectrum analyzer digital Fourier analyzer.

Unit-V Digital Instruments  
Advantages of Digital instruments over analog instruments, resolution and sensitivity of Digital 
meters., Digital Voltmeter - Ramp type, Dual slope integration type, Integrating type, Successive 
approximation type, Continuous balance DVM or Servo balancing potentiometer type VM. , 
compression of Electronic & Digital Volt meter, Digital Multimeter, Digital frequency meter, 
Time period measurement, High frequency measurement, Electronic counter, Digital tachometer, 
Digital PH meter, Digital phase meter, Digital capacitance meter. Digital display system and 
indicators like CRT, LED, LCD, Nixies, Electro luminescent, Incandescent, Electrophoretic 
image display, Liquid vapour display dot-matrix display, Analog recorders, X-Y recorders.
Instruments used in computer-controlled instrumentation RS 232C and IEEE 488, GPIB electric interface.

**List of Experiments:-**
1. Study and Measurement using Maxwell Inductance Bridge.
4. LVDT and capacitance transducers characteristics and calibration.
5. Resistance strain gauge- Strain Measurement and calibration.
7. Study & measurement of frequency using Lissajous patterns.
9. Study of Piezo-electric Transducer and Measurement of impact using Piezo-electric Transducer
10. Measurement of Displacement using LVDT.

**Textbooks:**
B.Tech. (Electrical Engineering)
V Semester
POWER ELECTRONICS

Unit-I
Advantages and application of power electronic devices characteristics, Symbol & application of power diodes, power transistors, GTO, Triac, Diac, Power MOSFET, IGBT, LASCR, Fast recovery diode, schotkey diode MCTs. Principle of operation of SCR, Two transistor analogy, brief idea of construction of SCR, Static characteristics of SCR, Condition of turn on & off of SCR Gate characteristics, Method for turning on of SCR, Turnoff methods, different commutation techniques (Class A,B,C,D,E, & F Commutation) firing of SCR, Use of pubic transformer and opto isolator in firing, Resistance firing Ckt, Resistance capacitance firing circuit, UJT firing cut, and ramp triggering, firing for 3-Φ circuit. SCR rating & protection of SCR over voltage, Over current, Suprior firing, Design of snubber circuit and protection of gate of SCR, heating, cooling & mounting of SCR series and parallel operation of SCR, String efficiency & problem associated with series and parallel operation of SCR

Unit-II
Operation and analysis of single phase (Half wave & Full Wave) and multiphase (Three Phase) uncontrolled and controlled rectifier circuit with resistive, resistive & inductive load (continuous & non continuous conduction, Fw small & very large inductive loads) and RLE loads. Estimation of average load voltage and load current for above rectifier circuits active and reactive power input. Effect of free wheeling diode and source inductance on performance of these rectifier circuits . Comparison of mid point & Bridge rectifier circuits.

Unit-III
Series and parallel inverter, Voltage source & current source inverter, Single phase and three phase bridge inverter, Self cumulated inverters., Mc- murray & MC murray bed ford inverters, Voltage control of single phase and three phase bridge inverter, Harmonics & their reduction techniques.

Unit-IV
Principle of chopper operation, Various control strategies in chopper, Step up & step-up/step down choppers, chopper configuration (Type A,B, C,D, & E), Steady state analysis of chopper circuits, Current & voltage commutation of chopper circuits Jones & Morgens chopper

Unit-V
Single phase (mid point & bridge configuration) and three phase cyclo convertor configuration and operating principles. AC voltage controllers (using SCRs & Traics) single phase full wave controller with R and RL load, Estimation of RMS load voltage, RMS load current and input power factor, three phase AC voltage controller (Without analysis) Dual converter Switched mode voltage regulator buck, Boost, Buch & Boost, Ck regulators.
**List of Experiments:**
1. Study the performance of single-phase half-wave and full-wave uncontrolled rectifiers.
2. Study different firing circuits of SCR.
3. Study forced commutation circuits of SCR.
4. Study protection circuits of SCR: (i) $dv/dt$ (ii) $di/dt$ (iii) Over voltage (iv) Over current.
5. Study the characteristics of a Thyristor and a Triac.
7. Study firing circuit of SCR using cosine-wave scheme.
9. Study digital firing circuit of SCR.
10. Study operation of Triac in all four modes and study AC phase control using Triac.

**References:**

**Textbooks:**
1. P.C. Sen, Power Electonics, TMH
2. Dr. P.S. Bhimbhra, Power Electonics, Khanna Pub.
B.Tech. (Electrical Engineering)
V Semester
SWITCHGEAR AND PROTECTION

Unit-I
Switchgear- Introduction, functions of a circuit breaker, contacts separation and arc phenomenon, theory of arc formation and its extinction, recovery voltage, restriking voltage, interruption of capacitive and inductive currents, resistance switching, double frequency transients, circuit breaker ratings, clearing time, reclosing time, classification of circuit breakers, oil, air-blast, vacuum and SF6 circuit breakers.

Unit-II
Protection Against Lightning- Lightning mechanism and its characteristics, over- voltages due to lightning, protection of lines and sub-stations against lightning using shield wires, tower footing resistance, counterpoises, ground wires, rod gaps, lightning arrestors, their construction, working and ratings, surge absorbers and surge divertors.

Unit-III
Insulation Co-ordination: Impulse volt-time characteristics of electrical apparatus, basic impulse insulation level, insulation levels of sub-station equipments

Unit-IV
Protective Relays: Introduction, basic requirements, operating principles and characteristics of electromagnetic type over-current, differential, impedance and admittance relays. Detail of protection against abnormal conditions for alternators, transformers, feeders transmission lines, and bus-bars. Carrier current protection for long lines.

Unit-V
Static Relays: Introduction, comparison with electromagnetic relays, working of instantaneous, definite time, inverse time and directional over current relays, introduction to digital relays.

List of Experiments:
Operating Characteristics of
1. Over Voltage Relays
2. IDMT Relays
3. Percentage based differential relays
4. Buchholz relays
5. Solid state over current relays

References:
2. Badriram & Vishwakarma, Power System Protection

Textbooks:
B.Tech. (Electrical Engineering)
V Semester
SIMULATION LAB

LIST OF EXPERIMENT

1. Study of MATLAB and its Application.
2. To generate the sinusoidal and co sinusoidal pulse with the help of MATLAB.
3. To find the time response for series RLC circuit.
4. To plot output waveform of MOSFET.
5. To generate the pulse with the help of PWM techniques.
6. To Analyze the operation of single phase half wave rectifier supply resistive, inductive loads.
7. To model and simulate the single phase full wave controlled bridge rectifier fed separately excited DC motor by using MATLAB/SIMULINK.
8. To observe the waveform of single phase semi convertor circuit with RL load.
9. To observe the waveform of ASK, FSK and PSK using MATLAB.
10. To observe the waveform of Clipper and Clamper Circuit
11. To observe the waveform of single phase half wave AC VOLTAGE CONTROLLER
12. To observe the load current, voltage and speed waveform of Asynchronous Machine
13. To observe the waveform of single phase full wave rectifier circuit with R load
14. To observe the waveform of single phase half wave thyristor circuit with R load
15. To observe the waveform of single phase semi convertor circuit, when one of the thyristor is replaced by diode

1. Shailandra Jain, Modeling and simulation using MATLAB/SIMULINK, willey
2. I.J. Nagrath, D.P. Kothari, Electrical machine, TMH
3. P.C. Sen, Power Electronics, TMH
UNIT-I
Introduction- Classifications of Electric Drives, components of electric drives, advantages of electric drives, Review of characteristics and speed control of d.c. and a.c. motors. Dynamics of Electric Drives:- Fundamental torque equation, speed-torque conventions and multiquadrant operation, equivalent values of drive parameters, components of load torques, nature and classification of load torques, calculation of time and energy-loss in transient operations, criteria for steady state stability, load equalization.

UNIT-II
Rating and Heating of Motors- Thermal model of motor for heating and cooling, classes of motor duty, determination of motor rating, frequency of operation of motors subjected to intermittent loads.

UNIT-III
Rectifier Control of D.C. Drives- Controlled rectifier circuits, 1-phase fully controlled rectifier-fed separately excited d.c. motor, 3-phase fully controlled rectifier-fed separately excited d.c. motor, multi quadrant operation of fully-controlled rectifier-fed d.c. motor. Chopper Control of D.C. Drives- Principle of operation and control techniques, motoring operation of separately excited and series excited motors, multi quadrant control of chopper-fed motors.

UNIT-IV
Induction Motor (IM) Drives:- 3-phase a.c. voltage controller-fed IM drive, voltage source inverter (VSI) and current source inverter (CSI) variable frequency drives, comparison of VSI and CSI drives, cyclo-converter-fed IM drive, static rotor resistance control of 3-phase slipring IM.

UNIT-V
Synchronous Motor Drives- VSI drive, CSI drive, CSI drive with load commutation, cyclo-converter drive, Braking methods- Various methods of braking d.c. and a.c. motors, regenerative braking of d.c. motors during chopper control, static scherbius drive, commutatorless Kramer drive. Introduction to Microprocessor Control of Electric Drives.

Reference Books:

Text Book:
List of Experiments (Using MAT LAB):
1. Study speed control of separately excited dc motor by varying armature voltage using single-phase fully controlled bridge converter.
2. Study speed control of separately excited dc motor by varying armature voltage using single phase half controlled bridge converter.
3. Study speed control of separately excited dc motor using single phase dual converter (Static Ward- Leonard Control)
4. Study speed control of separately excited dc motor using MOSFET/IGBT chopper
5. Study closed loop control of separately excited dc motor
6. Study speed control of single phase induction motor using single phase ac voltage controller.
7. Study speed control of three phase induction motor using three phase ac voltage controller.
8. Study speed control of three phase induction motor using three phase current source inverter
9. Study speed control of three phase induction motor using three phase voltage source inverter.
10. Study speed control of three phase slip ring induction motor using static rotor resistance control using rectifier and chopper
UNIT-I

UNIT-II
Design of Transformers: General considerations, output equation, main dimensions, leakage reactance, winding design, tank and cooling tubes, calculation of magnetizing current, losses, efficiency and regulation.

UNIT-III
Design of DC Machines: Output Equations, Main Dimensions, Magnetic Circuit Calculation, Carter’s Coefficient, Net length of Iron, Selection of No.of Poles, Design of Armature, Design of Commutater and Brush.

UNIT-IV
Design Three-phase induction motors: General considerations, output equation, choice of specific electric and magnetic loadings, No. of slots in stator and rotor, elimination of harmonic torques, design of stator and rotor windings, leakage reactance, equivalent resistance of squirrel cage rotor, magnetizing current, temperature rise and efficiency.

UNIT-V
Design of Alternators: Classification and their comparison, specific loadings, output coefficient, main dimensions, short circuit ratio, elimination of harmonics in generated EMF, stator winding design. Introduction to computer aided electrical machine design.

Reference Books:

2. Say MG, “The performance and design of A.C. Machines”.

Text Book:
B.Tech (Electrical Engg.)  
Semester-VI  
CONTROL SYSTEMS

UNIT-I  

UNIT-II  
Time Domain Analysis: standard test signal, type & order, steady state response analysis, steady state error for different type of inputs and different type of system, relation between static and dynamic error constant. transient state analysis, second order system, effect of damping on nature of response.

UNIT-III  

UNIT-IV  

UNIT-V  
State space analysis: state model from differential equation, STM, transfer function from state model, stability for state model, controllability, observability, solution of state equation, state diagrams

Reference Books:  

Text Book:  
1. K. Ogata, “ Modern Control Engineering”, PHI.  
2. B.S.Manke “ Linear Control System”, Khanna publication

List of Experiments:  
1. Study time response of second order system.  
2. To study characteristics of Synchros.  
3. To study effect of feedback on servomotors.  
4. Determination of transfer function of A-C servomotor  
5. Determination of transfer function of D-C servomotor.  
6. Formulation of PI & PD controller and study of closed loop responses of 1st and 2nd order dynamic systems.
B.Tech (Electrical Engg.)
Semester-VI
MICROPROCESSOR AND MICROCONTROLLER

UNIT-I
Microprocessor Architecture-8085 microprocessor architecture, timing and control unit, machine cycles, interrupt diagram. Architecture of 8086 microprocessor

UNIT-II
Programming- Addressing modes, instruction set, assembly language programming, program for multi byte addition/subtraction, multiplication, division, block transfer.

UNIT-III

UNIT-IV
Semi Conductor Memory- Read only memories, random access memories. Interfacing of memories with 8085/86.

UNIT-V

Reference Books:

Text Book:

List of Experiment:
1.Familiarization with 8085/86 Microprocessor and 8051 Microcontroller kit.
2.Write program for display of 24 hour clock on 8085 mp kit.
3.To generate square wave, saw tooth, triangular wave of 1KHz frequency and 50% duty cycle using 8051 kit.
4.To develop and run a program for arranging in ascending/descending order of a set of numbers
5.To obtain interfacing of keyboard and DMA controller
6.To perform microprocessor based traffic light control operation through 8085 kit
UNIT-I

UNIT-II

UNIT-III
Fourier Analysis of Discrete Time Signals & Systems: Discrete-Time Fourier series, Discrete-Time Fourier Transform (including DFT) and properties. Frequency response of discrete time LTI systems.

UNIT-IV
Laplace Transform: Laplace Transform and its inverse: Definition, existence conditions, Region of Convergence and properties, Application of Laplace transform for the analysis of continuous time LTI system (stability etc.) Significance of poles & zeros.

UNIT-V

Reference Books:
UNIT-I
Energy Review of various energy sources, Need of energy conservation and energy audit.

UNIT-II

UNIT-III

UNIT-IV

UNIT-V
Energy Audit: Procedure of Energy audit, ABC analysis, Energy Flow Diagram and its importance, Measurements in energy audit and various measuring instruments, Questionnaires for the energy audit, internal energy audit checklist, Equipment used for energy conservation, Calculation of payback period for energy conservation equipment. IE rules and regulations for energy audit, Electricity act 2003 (Numerical).

Reference Books:

Text Books:
UNIT-I
Representation of Power System Components- Synchronous machines, Transformers, Transmission lines, one line diagram, Impedance and reactance diagram, per unit System.

UNIT-II
Symmetrical components- Symmetrical Components of unbalanced phasors, power in terms of symmetrical components, sequence impedances and sequence networks. Symmetrical fault analysis- Transient in R-L series circuit, calculation of 3-phase short circuit current and reactance of synchronous machine, internal voltage of loaded machines under transient conditions.

UNIT-III
Unsymmetrical faults -Analysis of single line to ground fault, line-to-line fault and Double Line to ground fault on an unloaded generators and power system network with and without fault impedance. Formation of Z bus using singular transformation and algorithm, computer method for short circuit calculations.

UNIT-IV
Load Flow- Introduction, bus classifications, nodal admittance matrix (Y BUS ), development of load flow equations, load flow solution using Gauss Siedel and Newton Raphson method, approximation to N-R method, line flow equations and fast decoupled method.

UNIT-V

Power Control- Concept of Load frequency control, Concept of voltage and reactive power control.

Reference Books:

Text Books:

List of Experiments:
1. To determine direct and sub transient axis reactance ($x_d$) and quadrature axis reactance ($x_q$) of a salient pole alternator.
2. To determine negative and zero sequence reactance of an alternator.
4. To study the IDMT over current relay and determine the time current characteristics.
5. To study percentage differential relay, Impedance, MHO and Reactance type distance relays.
6. To study Ferranti effect and voltage distribution in H.V. long transmission line using transmission line model.
7. To obtain formation of Y-bus and perform load flow analysis using Gauss-Siedel method.
8. To perform symmetrical and unsymmetrical fault analysis in a power system.
UNIT-I
Illumination- Nature of light, important definitions, laws of illumination, principle of production of light- discharge through gases under pressure – incandescence/sources of light-filament lamp, halogen lamp-discharge lamp-sodium discharge lamp,high pressure mercury discharge lamp, dual lamps, fluorescent lamps, lamp efficiency,requirements of good lighting, illumination level, absence of contrasts, shadows, glare, colour rendering-lamp fittings. Lighting schemes, design of indoor & outdoor lighting system-street lighting, flood lighting, photometers.

UNIT-II
Electric Heating- Advantages of electric heating, classification of heating methods, detailed study of resistance heating, arc heating, electron bombardment heating, induction heating & dielectric heating and their control.

UNIT-III
Electrolytic Processes- Fundamentals of electro deposition-laws of electrolysis applications of electrolysis, electro deposition, manufacture of chemicals, anodizing, electro-polishing, electro-cleaning, electro-parting, electrometallurgy, electric supply.

UNIT-IV
Train Mechanics- Types of services, characteristics of each type of service, speed time curve, simplified speed time curve, average speed, schedule speed, factors affecting schedule speed, tractive effort for propelling a train, power of the traction motor, specific energy output, specific energy consumption, factors affecting specific energy consumption, mechanics of train movement, coefficient of adhesion, factors affecting slip.

UNIT-V
Electric Traction- D.C. & A.C. traction motors, their characteristics Traction Motor Control: Starting and speed control of D.C. series motors, shunt transition, bridge transition, drum controller employing shunt transition, energy saving with series parallel starting, metadyne control, multiple unit control, braking of traction motor. Current Collection Systems- Conductor rail equipment, current collection gear for OHE: Cable collector, pole collector, bow collector, pantograph collector.

B.Tech (Electrical Engg.)
Semester-VII
MAJOR PROJECT (PLANNING AND LITERATURE SURVEY)

The object of Project Work I is to enable the student to take up investigative study in the broad field of Electrical Engineering, either fully theoretical/practical or involving both theoretical and practical work to be assigned by the Department on an individual basis or two/three students in a group, under the guidance of a Supervisor. This is expected to provide a good initiation for the students in R&D work. The assignment to normally include: Survey and study of published literature on the assigned topic; Working out a preliminary Approach to the Problem relating to the assigned topic; Conducting preliminary Analysis/ Modelling/ Simulation/ Experiment/ Design/ Feasibility; Preparing a Written Report on the Study conducted for presentation to the Department; Final Seminar, as oral Presentation before a Departmental Committee.
UNIT-I
Introduction to computer aided tools for analysis and design- software and hardware PSPICE /PSIM / MATLAB-SIMULINK/ MATHEMATICA/ 20SIM / LABVIEW / DSPACE (description as per choice/ availability)

UNIT-II
Modelling of Electrical/Electronic components and systems, Time and Frequency domain analysis, parameter variations, response representation storage/import/export.

UNIT-III
Optimization methods: parametric optimization and functional optimization. Design issues of Electrical/Electronic components and systems.

UNIT-IV
Applications for control systems, power systems and electrical machines.

Reference Books:

Text Books:
UNIT-I

UNIT-II

UNIT-III
Reliability of Engineering Systems Reliability model of a generating unit, State space methods, Combing states, sequential addition method, Load modeling, Cumulative load model, merging of generation and load models, Loss of load probability, Percentage energy loss, Probability and frequency of failure, Operating reserve calculations.

UNIT-IV
Power Network Reliability Weather effect on transmission lines, Common mode failures, Switching after faults, state components, Normally open paths, Distribution system reliability.

UNIT-V
Composite System Reliability Bulk Power supply systems, Effect of varying load, Inter connected systems, correlated and uncorrelated load models, Cost and worth of reliability.

References:
The object of Project Work is to enable the student to extend further the investigative study taken up under EC P1, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from R&D laboratory/Industry. This is expected to provide a good training for the students in R&D work and technical leadership. The assignment to normally include: In depth study of the topic assigned in the light of the Report prepared; Review and finalization of the Approach to the Problem relating to the assigned topic; Preparing an Action Plan for conducting the investigation, including team work; Detailed Analysis/ Modelling/ Simulation/ Design/ Problem Solving/ Experiment as needed; Final development of product/process, testing, results, conclusions and future directions; Preparing a paper for Conference presentation/Publication in Journals, if possible; Preparing a Dissertation in the standard format for being evaluated by the Department; Final Seminar Presentation before a Departmental Committee.
B.Tech (Electrical Engg.)
Semester-VIII
MODELLING AND SIMULATION LAB

2. Developing Simulation Models for single and three phase Rectifier, Inverter, and Converter for different load models.

3. Developing Simulation Models using FACTS Devices i.e. STATCOM, SVC, TCSC, SSSC, IPFC, UPFC in power system transmission lines.

Reference Book:
1. Shailendra Jain "Modeling and Simulation using MATLAB Simulink" wiley india & sons
UNIT-I
Introduction of Sustainable Development-explains and critically evaluates the concept of sustainable development, Environmental degradation and poverty Sustainable development: its main principles, the evolution of ideas about sustainability, strategies for promoting sustainable development, resistances to the concept, and some alternative approaches. Examine some important current issues and areas of debate in relation to sustainable development.

UNIT-II
Innovation for sustainable development- Environmental management and innovation strategies.

UNIT-III
Societal transformations. Institutional theory.

UNIT-IV
Governance for sustainable development. policy responses to environmental degradation.

UNIT-V
Capacity development for innovation. research methods.

B.Tech (Electrical Engg.)
Elective-I(B)
SCADA SYSTEM & APPLICATION

Unit I
Introduction to SCADA and PLC SCADA: Data acquisition system, evaluation of SCADA, communication technologies, monitoring and supervisory functions. PLC: Block diagram, programming languages, Ladder diagram, Functional Block diagram, Applications, Interfacing of PLC with SCADA.

Unit II
SCADA system components: Schemes, Remote Terminal Unit, Intelligent Electronic Devices, Communication Network, SCADA server.

Unit III
SCADA Architecture-Various SCADA Architectures, advantages and disadvantages of each system, single unified standard architecture IEC 61850 SCADA / HMI Systems.

Unit IV
SCADA Communication-Various industrial communication technologies- wired and wireless methods and fiber optics, open standard communication protocols.

Unit V
Operation and control of interconnected power system-Automatic substation control, SCADA configuration, Energy management system, system operating states, system security, state estimation, SCADA applications Utility applications, transmission and distribution sector operation, monitoring analysis and improvement. Industries oil gas and water. Case studies, implementation, simulation exercises.

Reference Books:
1. Stuart A Boyer: SCADA supervisory control and data acquisition.
2. Gordan Clark, Deem Reynders, Practical Modem SCADA Protocols.
UNIT I
Introduction to FACTS controllers – Reactive power control: Reactive power, uncompensated transmission line, reactive power compensation, principles of conventional reactive power compensators: Synchronous condensers, saturated reactor, phase angle regulator and other controllers.

UNIT II
Thyristor Controlled Shunt Compensator: Objective of shunt compensation- Principle and operating characteristics of Thyristor Controlled Reactor (TCR)- Thyristor Switched Capacitor (TSC)- Static VAR Compensators (SVC)- SVC control system- SVC voltage regulator model- Transfer function and dynamic performance of SVC- Transient stability enhancement and power oscillation damping, mitigation of sub-synchronous resonance.

UNIT III:

UNIT IV

UNIT V:

Reference Books:

Text Books:
UNIT-I

UNIT-II
Liquid Dielectrics- Conduction & breakdown in pure & commercial liquids, suspended particle theory, stressed oil volume theory, liquid dielectrics used in practice; Solid Dielectrics- Intrinsic, electromechanical, & thermal breakdown, composite dielectric, solid dielectrics used in practice; Applications of Insulating Materials: Application of insulating materials in power transformers, rotating machines, circuit breakers, cables & power capacitors.

UNIT-III

UNIT-IV
High Voltage Testing of Electrical Apparatus: Testing of insulators, bushings, circuit breakers power capacitors & power transformers.

UNIT-V

Reference books:

Text books:
UNIT-I
Review: Primitive machine, voltage and torque equation. Concept of transformation, change of variables, m/c variables and transform variables. Application to D.C. machine for steady state and transient analysis, equation of cross field commutator machine.

UNIT-II

UNIT-III
Synchronous Machine: Transformation equations for rotating three phase windings, Voltage and power equation for salient and non salient alternator, their phasor diagrams, Simplified equations of a synchronous machine with two damper coils.

UNIT-IV
Operational Impedances and Time Constants of Synchronous Machines : Park's equations in operational form, operational impedances and G(P) for a synchronous machine with four Rotor Windings, Standard synchronous machine Reactances, time constants, Derived synchronous machine time constants, parameters from short circuit characteristics.

UNIT-V
Approximate Methods for Generator & System Analysis: The problem of power system analysis, Equivalent circuit & vector diagrams for approximate calculations, Analysis of line to line short circuit, Application of approximate method to power system analysis.

Reference Books:
1. The General theory of Electrical Machines - B.Adkins
2. The General theory of AC Machines - B.Adkins & R.G.Harley
3. Generalised theory of Electrical m/c - P.S.Bhimbra
UNIT-I
Constitution of EHV a.c. and d.c. links, Kind of d.c. links, Limitations and Advantages of a.c. and d.c. transmission, Principal application of a.c. and d.c. transmission, Trends in EHV a.c. and d.c. transmission, Power handling capacity. Converter analysis garetz circuit, Firing angle control, Overlapping.

UNIT-II
FACTS devices, basic types of controller, series controller, static synchronous series compensator(SSSC), thyristor-controlled series capacitor(TCSC), thyristor controlled series reactor(TCSR), shunt controller (STATCOM), static VAR compensator(SVC), series-series controller, combined series-shunt controller, unified power flow controller(UPFC), thyristor controlled phase shifting transformer(TCST).

UNIT-III
Components of EHV d.c. system, converter circuits, rectifier and inverter valves, Reactive power requirements, harmonics generation, Adverse effects, Classification, Remedial measures to suppress, filters, Ground return. Converter faults & protection harmonics misoperation, Commutation failure, Multiterminal D.C. lines.

Unit-IV
Control of EHV d.c. system desired features of control, control characteristics, Constant current control, Constant extinction angle control. Ignition Angle control. Parallel operation of HVAC & DC system. Problems & advantages.

Unit-V
Travelling waves on transmission systems, Their shape, Attenuation and distortion, effect of junction and termination on propagation of traveling waves. Over voltages in transmission system. Lightning, switching and temporary over voltages: Control of lighting and switching over voltages

Reference books:
2. Kimbark,-" HVDC Transmission" jodhn willy & sons pub.

Text books:
1 Padiyar, -"HVDC Transmission" 1 t Edition ,New age international pub
UNIT-I
State Space Analysis of Continuous System: Review of state variable representation of continuous system, conversion of state variable models to transfer function and vice-versa, solution of state equations and state transition matrix, controllability and observability, design of state observer and controller

UNIT-II
Analysis of Discrete System: Discrete system and discrete time signals, state variable model and transfer function model of discrete system, conversion of state variable model to transfer function model and vice-versa, modelling of sample hold circuit, solution of state difference equations, steady state accuracy, stability on the z-plane and Jury stability criterion, bilinear transformation

UNIT-III
Stability: Lyapunov’s stability theorems for continuous and discrete systems, methods for generating Lyapunov function for continuous and discrete system, Popov’s criterion.

UNIT-IV
Non linear Systems: Types of non linearities, phenomena related to non-linear systems. Analysis of non linear systems-Linearization method, second order non-linear system on the phase plane, types of phase portraits, singular points, system analysis by phase-plane method, describing function and its application to system analysis.

UNIT-V

Reference Books:
1. B.C. Kuo, “Digital Control Systems” Sounders College Publishing

Text books:
UNIT-I

UNIT-II
A.C. to A.C. Converter: Classification, principle of operation of step up and step down cycloconverter. Single phase to single phase cycloconverter with resistive and inductive load. Three phase to single phase cyclo converter: Half wave and full wave. Cosine wave crossing technique. Three phase to three phase cyclo converter. Output voltage equation of cyclo converter.

UNIT-III
D.C. to A.C. Converter: Classification, basic series and improved series inverter, parallel inverter, single phase voltage source inverter, steady state analysis, Half bridge and full bridge inverter: Modified Mc Murray and Modified Mc Murray Bedford inverter, voltage control in single phase inverters, PWM inverter, reduction of harmonics, current source inverter, three phase bridge inverter.

UNIT-IV

UNIT-V
Applications: Dielectric and induction heating. Block diagram of D.C. and A.C. motor speed control.
